

## BlueRunner Independent Schools Meal Recording on Entry

Our tablet-optimised Meal Recording solution is perfect for **independent schools** whether it's recording meals included in fees, or opening new catering channels.

Built within our Cashless POS system, which automatically identifies students by RFID, QR code, biometric fingerprint or facial recognition for the meal chosen, streamlining your catering services.

### What does this mean for you?

Introducing our intuitive meal recording solution: A platform that helps to reduce food wastage through tracking accurate numbers, both recording student meals who have them included in fees, and charging students where required who are accessing the restaurant on an ad-hoc basis, regardless of your student fee set-up.

As well as meal recording and using it as your catering service, it also offers complete cashless POS for school retail services such as tuck shops and uniform shops, supporting alternative revenue streams in one consolidated back office.

Effortlessly record all points of sale with pinpoint accuracy, reducing the need for time-consuming administrative tasks and providing an efficient, automated service to your students. Our completely cashless system offers a transparent environment, allowing pupils to freely choose their preferred school meals.

- Automatic recording of entry to lunch hall
- Accurate meal numbers to reduce food wastage
- Assign daily wallets against student profiles with lunch included in fees
- Capture and charge students without lunch entry included
- Manage alternative service types for lunch, breakfast, tuck shop and other points of sale
